Abstract: The aim of this study was to compare divorce among the couples with traditional and modern marriage. Research hypothesis was the incidence of divorce is different between couples that have traditional marriage and the couples that have modern marriage. In this study, 80 subjects were selected; that sample selection was through the probability sampling method. The divorce test was carried out on them. Independent t tests were used for statistical assumptions. The results showed that there was a significant difference between the prevalence of divorce between couples that have traditional marriage and the couples that have modern marriage. In other words, the prevalence of divorce in couples who were married in as the traditional was more than the couples that have modern marriage.

1. Introduction

In general, one of the main topics of youth is marriage. Continuity of life and peace of mind are of great importance in the marriage. In this social phenomenon (Marriage) the sides draw of each other in the satisfaction of basic needs, social interaction and education children; and couples trying to transfer attitudes, beliefs and values to their children. Divorce happens in the couple if there is no understanding in the social economic and family issues. Life is an important concept in Levinson's theory, and it is the basic pattern or design of life at any given moment. Personal relationships with others, includes: individuals, groups and institutions are ingredients implementation of life. Only the living can have many components, but usually only a few of them, which are associated with marriage, family and career, are vital for life. However there are large individual differences in the main value of the component side of life. Biographical reports of many people confirm that describes the stages of life from the perspective of Levinson. These reports also indicate that early adulthood (young), is the most of the energy in their favor, conflict and stress. These years, high satisfaction of love, sexuality, family life, career and research accomplishments are important goals of life. But these issues have a lot of pressures on the people. Important decisions about marriage and business are important issues before many people have the life experience necessary to choose wisely. Women in live longer have more same-sex intimate relationships than men. Women say they prefer just to talk with friends. Whereas men say they prefer do anything, when they are with their friends. These are due to quality of friendship and individual differences, which gender identity and marriage activity involved on them. Those who being informed

of the behavioral characteristics of each other after married due to men and women with mental health problems, or lack of understanding of each other, will cause problems later in the life; and after the wedding they discuss the many issues (Karbasi, 2005). This separation is different from the actual subtraction (That is due to the cessation of cohabitation), and must be done by court order. And that means that, couples living separated without divorce without duties in common life. But if the death of a spouse, the other party is entitled to the legal rights, upon the death of spouse is determined. However, if the parties their asked of the court, physically subtraction is demanding, they could be downed inheritance rights after the death. This issue has many branches, which are influence in the French Civil Code (Haqqani, 1986). After adolescence and young, with diverse experience, growing relationship with the social environment, development dimensions of intellectual, understanding many aspects and reality of life, anyone considering the material and spiritual and with depending on their character and with influence of family life thinks to marriage as a target. And in this time that he thinks in the case of married and a partner who could be friendly to him. He will check your employment opportunities, economic and social situation and to search for select a suitable wife. He measures individuals of the opposite sex, directions, intellectual, behavioral, economic, familial, social and educational. And tries their friendly relations with a person are additional. This type of culture, community and family ties, and thus determines the shape is different. The relations of the two makes k d to assess the need for having a common life and marriage do that the agreement will lead to marriage. Otherwise withdraw of the marriage relationship and the friendship continues, or due to the differences

between cut and re-assessed to be anyone else. Unless the male and female candidates have ample opportunity to review each, and agreed by both male and female, and their views should be considered. Otherwise it may be a conflict between the married couple will appear. In addition, because families play a vital role in this type of marriage; therefore, allow imposing their views in many issues girls and boys are involved, and this will cause a married couple. Whereas the involvement of the families of sons and daughters and try to apply for their children under proper guidance and do manufacturer, them to maintain their lives and friendship and mutual advice. And if you need any assistance do not hesitate to give them stability and shared prosperity in the lives of their children will ensure (Askari, 2001). Although the subject of this research is divorced, but is required before divorce, the issue of marriage discussed which context of divorce is based on it. Marriage is the basis of human survival and reproduction condition in different ethnic groups, in schools, communities and different generations, with different traditions and customs. Select the dickey, survival, reproduction and birth of a new generation are involves maintaining and improving the human race, training the next generation, community affairs and activities of individual in the production and distribution of economic, flow of social interaction and cultural processes, working in politics and art, etc. are indebted to children and future generations, which will happen of marriage. Marriage in general has the following objectives and functions: Creating a center of calm and familiarity and affection for couple and children; replacement and creating a new generation and raising and mighty healthy children; and a means to achieve purity in moral relationships. The couple's union is not always going well and always ethical and behavioral and emotional adjustment, and communication between couples cannot bear the thought and everyday life circumstances and personal and social characteristics of individuals and couples is not to embrace each other to deal with problems between couples in love and always balance each other and keep is not continuity and stability in the marriage. Forever and environmental factors such as parental addiction, bankruptcy, personal characteristics such as aggression and nervousness in prison and irritability, and verbal or financial weakness or obscene behavior, such as gambling and drinking alcohol buddy alcohol unwilling couples play together desire or select another dickey or deception and bad speculation and suspicion, such as items that threatens the foundation of families. If couples are unable to overcome and cope with this phenomenon inevitably become a ruinous divorce happens.

Divorce is considered among the most important and most social damage. The word of divorce means release and separation of marriage and the marriage bond, and is terminating the marriage and is a phenomenon that caused ability to disrupt marital ties. On the other hand, sometimes it can be kind of marriages and marriages based in the strong role, sometimes the marriage of the parents and the children and wife to determining criteria marriage can be a positive influence (Sotoodeh, 2006). The aim of this study was to compare divorce among the couples with traditional and modern marriage.

2. Methodology

Research methods used in this research was a comparison - scientific method, that purpose of this method was finding the cause of the possible a behavior pattern. For this purpose, the subjects that have the studied behavior are compared the subjects that haven't the studied behavior. This research often is called "after the event"; because refers to things that have happened in the pre (Delavari, 2006). The statistical population in this study includes spouses who have divorced, include people who have modern weddings and those who have traditional marriage. The sample consisted of two groups of 80 individuals, which 40 of them have modern weddings and 40 people have traditional marriage. Sample selection was through the probability sampling method. The purpose of to be independent this is the selected a member does not affect on any of the other selected community. Measurement tool in the study are as follows: Divorce and misunderstandings couples' questionnaire; this questionnaire has 40 two options questions with limited response. Way to implement this test is to that after we asked the participants to answer the questions carefully, and tests were run. Independent t tests were used for statistical assumptions in the inferential statistical method, also tables and graphs were used in the descriptive statistics.

3. Results

The results showed that there was a significant difference between the prevalence of divorce between couples that have traditional marriage and the couples that have modern marriage. In other words, the prevalence of divorce in couples who were married in as the traditional was more than the couples that have modern marriage. Based on the results, lack of understanding, those around intervention, and female infertility were the most common causes of divorce. The raw scores of divorce test in the modern marriage and traditional marriage groups are present in Table 1. As can be seen to test the research hypotheses and comparison divorce among people with modern marriage and people with traditional marriage of independent variables, of

statistical methods were used in the inferential statistics; the results are given in Table 2. According to Table 2, Research hypothesis was confirmed and

the prevalence of divorce in couples who were married in as the traditional was more than the couples that have modern marriage.
