**Abstract:** Universe formation one of the most sought biggest question of all time right from ancient period upto this data (CERN Laboratory Geneva Suizerland, where more than 6000 Top Scientist world and about 3000 Engineers are working doing “Big Bang” in High collidator below 150 meter underground and in 27 kilometer diameter and since done 300 explosion and out of that only 30 times found some particle having mass and all these scientist claiming they will soon find out how the universe got formed? Here in this case the most fundamental theory of science accept it is most impossible to create any mass out of nothing and at the same time matter (mass) can not destroyed (to take it is presence mass (matter) on this stand scientist observed such huge mass this whole universe consist and they have found out one fictions totally unscientific just pure imagination and assumed this whole equivalent of this whole universal mass was exist or was presence as primordial material and considered it is highly compressed hot burning gases (probably Hydrogen?)<sup>1A, 1B, 1C</sup>. Now the concept changed to about 80 to 85% Hydrogen gas about 15% Helium gas and some trace %ge heavy dust particle and then the Big Bang. The explosion formation nucleated of gas clouds spreading whole universe which is trillions and trillions and trillions light year across (very and very opposite to Gravity as per concept of Sir Isaac Newton but afterward Gravity start condensing and not only condensing but even solidification (frozen Ammonia, Frozen Methane and water i.e. snow, ice like many mega planet of our solar system<sup>2A,3A</sup> but still all the stars mega stars, Black Holes, Dark energy, matter (which consist about 96% of the whole mass is still remains the same original constituent after about 10 Billions of year which is considered age of our Universe? These are no of controversies are there in this Universe formation process, which still scientist has tried to give them a base of science theories and laws I have taken view of all these controversies in my this be get solved, with one theory THE ALMIGHTY GOD’S CREATION THEORY to fit in regular scientific theory I have given it NEW REVOLUTIONARY MODIFIED THEORY (NRMT) I have this theory present with me already computer print out form ore than 800 pages (but uncorrected spelling and language wise due to little unexperianced computer coperator but will get corrected with in 4 to 5 months by blessing of Almighty God AMEN.

**Keywords** Big Bang law of conservation of mass, mass neither created nor destroyed, in any chemical reaction.

### Universe formation

Universe formation, one of the greatest and foremost mystery of the whole universe and especially our world the planet Earth, right from the very ancient time when the most; intelligent amongst all the living organism, human being has started thinking of how the Universe got created, so also what it consist, that is all the stars, planets, sun, moon, our Earth planet the fishes, Birds, all animals, reptiles, all humans, so also all the plants and trees etc. There are so many Ideas about that from time to time at different parts of world, by different means, different thinking. Some religious thinking gives very differently. At one time everybody thinking that earth is at centre of this Universe and sun is revolving around our planet earth, all these ideas got developed observing by the naked eyes, because it is highly impossible, That any man observing the Universe creation by his own eyes and physically present at the very creation of this Universe which consist all stars, planets, moon so also all the living organism,

plants, trees, animals including man ( human being) creation, as human being also one of the creation and must be got created after quite long time passed so impossible to witness the creation of Universe and all other things personally through his or her own eyes. So just observing all these creation which the universe consist, human being created the steps, one by one to come to some conclusion from different religious mans very different than the other religions of different parts of a world. This thinking was still going on, still observed by many different religious persons in different parts of world. But within about 300 - 350 years or so, there was quite good science development with many scientific instruments like simple microscope to complex election microscope, simple Telescope to Radio telescope and spectrophotometer and so many other instruments. Same way observing the whole Universe, sun, other stars, other planets, so also all the formed mountains, valleys, plains, rivers, all different living organisms and animals so also many fossils, scientific

community has created step by step creation of Universe including galaxies, stars, our earth, mountains, Valleys, plains, rivers, plants and trees, different one cellular living organism to multicellular specialized organ system animals including human being. How these all come in existence? Thus all these observations founded on keen observation and relating its connection with something already got accepted and modified to be relevant with some new finding and observation by help of sophisticated most advanced instrument like spectrophotometer, Radio telescope, Electron micro-scope and even some experiment and observation done on very high places on our planet earth so also some even going very high in space and from there observing by radio telescope some experiment spectrophotometer and other very advanced instruments, some experiments, observation by reaching other heavenly bodies like moon, mars, some observations sending space craft on other Planet space and observing from there and so on and so on. These observations done by many scientists all over the world and every body asserting his views to scientific community of the world and corroborating his finding to support by some experiment, photos and other materials and thus concluding his or her inventions to be fitted and relevant to previously accepted theory and laws. This process goes on, all these about 300-350 years and accordingly accepted scientific theory of Universe Formation and discarding totally many religious thinking of many thousands of years old. Being miracles after miracles, magic after magic as it was not founded on any scientific process or scientific principles invented within these last 300-350 years which gets modified by many Scientists of different science branches and then accepted by majority of scientists of this world, as it is based on science and scientific principle. And this has given many near about answers for which human being was thinking for many thousands of years. About these many questions and answers got solved as, some what nearer and reasonable for that time because nobody other could have given better than that so it is accepted by majority of scientists. And thus these findings, views become precedent science

Out of these, Universe formation is the greatest and foremost important, and most fundamental to begin with, as Universe consist all what your naked eye can not see it, can not or never reach it, to find it personally by their own eyes or by the help of some scientific instruments, as there is limitations to it's ability, human being can not surpass? And thus there are many theories developed by assuming it, and on that developed and established these theories and laws and on that basis given formation process, and many natural activities taking pace on earth, other planet, our sun, other stars of Galaxies, megastars, Giant Stars, Black holes and dark energy matter etc.

Before going in detail the process of universe formation accepted by most of the scientists, It is better to have some ideas of its huge size which is beyond any

body's expectations that how many Trillions of Trillions of Trillions of Tons it will weigh and you will get tired of putting zeroes on any figure right from your birth to your death, the same way the area it occupies, the space (mass less area) and the area in which all this mass get in filled will be Trillions and Trillions and Trillions of light years distance (one light year is speed of light which is 3, 00,000 km/sec traveling in one full year) that much distance in kilo meter, that indicates the vastness of universe which is beyond any bodies expectation to imagine, let us forget forever to reach or to have look personally where it ends the Universe!

Our planet earth is just a spike or may be micro grain with comparison to full universe mass, our earth planet is nearly spherical body with radius of 6400 km and circumference of 40000 km and have average density of  $5500 \text{ kg/m}^3$  and is members of our solar system which have sun at centre, nearest planet mercury, venous, then earth and mars as inner planet while Jupiter, Saturn Uranus, Neptune is a mega planet compare to earth and then Pluto as the most distant planet, our solar system, sun as star are members of milky way galaxy which have about 1.3 bullions, our sun like stars and our milky way, galaxy have areas that occupy across is 1,00,000 light years. Just imagine the huge vastness and like our milky way galaxy there are about 400 millions other galaxies present in our Universe as all got detected with help of very complex Radio Telescope and generally accepted by most of the Astronomer of this world. And thus any body can imagine the huge vastness and huge enormous mass it consists which will focus light and clear picture of its formation.

Now the most accepted view by majority of scientist and physicist, Astronomer consider that about 10 Billions of years ago, equivalent of this whole universal mass was at one place very very hot burning gases (probably Hydrogen) in highly compressed state. And then violent explosion took place that is called "Big Bang" and then all these hot burning gases (probably Hydrogen gas spread as gas clouds throughout the Universe and then the gas clouds got collected, condensed and formed Proto galaxies which ultimately transformed into Elliptical and spiral galaxies, our solar system is one members, out of 1.3 Bullion stars of milky way galaxy is spiral galaxy, how our sun got formed the same way inner planets i.e. Mercury, Venous, Earth and Mars formed out of this vast gas cloud by condensation while outer and mega planets i.e. Jupiter, Saturn, Uranus, Neptune, the smallest Pluto got formed still retain their frozen gas make up to this date. But the inner planets including our planet, Earth, Mercury, Venous and Mars last their condensed gas make up and turns in to bare rocky Crusts. The same thing could be possible for all about 400 millions Galaxies, with each Galaxy supposed to have about 1.3 billions star system like our Solar system it could be possible that they also gone to this type of conversion like our solar system. And this process of Universe formation is generally accepted

by majority of scientist, physicist and Astronomer as it is giving near about or most nearest reasonable answers, explanation and process of Universe formation, But there are many controversies, contradictions, inconsistencies and ambiguity present, for which nobody has given serious thinking, one simple reason being they never felt need of it, as they have no other suitable, reasonable, consistent, without any, ambiguity and without any Controversy theory, which will give very clear picture of universe formation?

You will definitely ask what are these controversies, contradiction, ambiguity and inconsistency, present in precedent science practices.

These will be as follows:-

1) The foremost and very vital fundamental fact and truth, no scientist of world yet taken in to Consideration is, if you will take into Consideration the whole mass Universe consists is so enormous, so huge that what most astronomer and scientist consider that there are about 400 millions of galaxies and out of that our solar system is one of the members of milky way galaxy which have like our solar system about 1.3 Billion star like our sun and each have mega and small planets and their satellite, like our moon so also lot many other heavenly bodies i.e. comets asteroids and meteorites, if you will try to measure only our solar system's mass, it will be nearly impossible or you will get tired to put zeroes on any figure and then just imagine the full milky way galaxy and its star system and than the whole Universe its member galaxy which are assumed about 400 millions thus imagine the quantity of mass the Universe consist is beyond measure. Now the main controversy in this case is how such huge huge mass got its existence? Who has created this? because at one hand, science and most of the scientists consider that it is highly impossible to create small, small, smallest mass even an atom, even the smallest atom hydrogen out of nothing, Please understand and think very seriously this statement out of nothing or very simple to say these facts that mass cannot be created and mass cannot be destroyed i.e. to get extinguished which is called the law of conservation of matter. Thus it is very clear that no human being can create any thing small of smallest thing out of nothing, the same way it is highly impossible by any human being to destroy the matter i.e. to take its existence away, to extinguish it totally is highly impossible. That indicates very strongly that the whole mass the Universe consist of will never die, It is live forever, it will be live up to eternity and eternity has no end of any period.

Thus what scientist are very much firm at one hand, but the other hand they are giving the presence of so huge, enormous unmeasurable mass, whole universe consist and the biggest question arises is, if it is highly impossible to create any thing out of nothing then how this so huge enormous unmeasurable mass comes in to existence? How and who has created? because you feel its presence very positively And here lies the biggest mystery, the biggest

secrecy which no scientist has ever given a serious thought, they can observe part of universe through their naked eyes and also can see with help of some scientific instruments, such as telescope, radio telescope and then very complex radio telescope and some other instruments such as spectro photometer and with help of these instrument tries to get steps of Universe formation, But no body has given serious thought that if at one hand it is highly impossible for any human being to create any thing even smallest mass out of nothing then how such huge mass came into existence? Who has created this whole universe mass? which is so huge, enormous and unmeasurable to any human being standard So the main question, who has created ? who has such ability capacity to create this whole universal mass out of nothing? as it is very sure and all scientist agree with it that no men, no scientist no magician have the capacity and ability to create anything out of nothing, But you can see even by the naked eyes some universal mass existence and presence positively and so they have totally omitted that and never gone in depth of it being very complex and most of the Religious holy Persons have assumed God the creator but being non visible and science only believes in presence and thus not given simple thought even to take into consideration this concept but to fit laws of science that it is impossible to create mass (matter) developed the idea that existence of universal mass is just fluke, mere chance, an accident that this whole mass the full universe consist as primordial material was actually hot burning gases probably Hydrogen gas at one place and in very highly compressed state and there was very huge violent explosion took place (Big Bang) speeding this primordial material hot burning gases (probably Hydrogen gas) as gas clouds throughout the universe as gas clouds and there after this gas clouds become cool and then formed proto galaxies and further transformed into elliptical and spiral galaxies totaling more than 400 millions in nos and out of that our star, sun and it is planets including our earth planets is one of them. But the main question is how it is possible just fluke mere chance to create such huge mass out of nothing and why it is not happening again because fluke chance and accident can happening again and again not single time it got reputed in this more than 10 Billions of years?

The 2<sup>nd</sup> most important controversy in Universe formation is most of the scientist has accepted the primordial the primordial material of the equivalent of this whole controversy in this universal mass is similar to our sun constituent i.e. about 80 to 85% Hydrogen gas + about 15% Helium and some trace 1 to 5% dust particle of metals.

3) The 3<sup>rd</sup> controversy in this formation of universe by "Big Bang" theory is to the Newton's law of gravitational force which all Scientists and astronomers believe and accept and the application of this Gravitational Force is as per Newton's two

laws of gravitational force, then if the whole universal and mass was present at one place in highly compressed hot burning (probably Hydrogen gas?) gas than as per Newton's law of gravitational force which considers each and every particle pulls other particle by gravitations force then in this case there should not be any explosion possible but all this burning gas (probably Hydrogen gas) should condense to liquid or frozen in to solid by which these particles goes away from each other to such infinite distance the universe have, which no human being can never reach, nor it is possible to measure, then how these mass which was present in one place can go to such un measurable distance (trillions and trillions light year distance) and that is also against very fundamental Newton's gravitational force and according to Newton's two laws of gravitational force by which it applicable to every mass and each particle. The present conventional precedent sciences don't have satisfactory, reasonable and consistent answer and explanation for it? And thus it is very much controversial, contradictory, ambiguous and in consistent to consider that way? And there must be some thing different than assumed and accepted by majority of scientist and not what it is considered and assumed?

4) The fourth controversial facts about universe formation which contains all the Galaxies about 400 million in no and one galaxy consist about 1.3 bullions stars their star system like our solar system nos of planets of different size, their satellites, other heavenly bodies like Asteroids, meteoroids comets etc to form from explosion of hot burning compressed gas (Probably Hydrogen?) and this has exploded violently producing Big Bang called Big Bang theory and then forming gas clouds spreading full universe and forming proto galaxies and then elliptical and spiral galaxies each galaxy consist 1.3 bullions stars, their mega planet and small planet, their satellites most stars keeps their gas though more than 10 bullions year passed, cannot turned into solids is very much controversial and ambiguous.

#### **CONCLUSION:**

Why it happens so much different and why it not happens for all very similar though such long, 10 bullions of year passed, no suitable most reasonable answers and explanation available or given serious thought for it by any scientist so far. one some what near by answer or explanation given is that of solar flair (solar wind) has grabbed this frozen methane, Ammonia ice layers many Kilometer thick and made these inner Planets and their Satellite bare Rocky crust but if you will see the distance in between these Planets their space area distance and sun our star these are many millions of Kilometer and you

know very well and it is not possible from space which starts where Atmosphere of these planets ends there is only zero gravity starts and from there it is not possible for any planet including our Earth and even our star sun to pull even smallest mass some few hundred gram things also these object are just revolving around that respective planet them how it is possible for sun our star and other star to pull these frozen methane , Ammonia and (ice), many Kilometers thick to take away from these planets which are away from sun few millions of Kilometer to more than 225 millions of Kilometer in case of (Mars) to takes away these frozen gas layers and to make these planets a rocky crust of many Kilometer thick and even no suitable theory given by any scientist that how this very compressed hot gas (Probably Hydrogen?) turned into Rock Strata with so many different atoms (about 92 naturally occurring element) and their metals, compounds in to solid state, liquid state and gaseous state but in stars can not changed accordingly within these 10 bullions of years, and still keeps their original very hot gas materials in stars mega stars, Nova and super Nova still keeps the gas hot burning gas, Hydrogen + Helium not become cool and converted in to solid Rock why it happened in one case and not in another uniformly is very much mysterious and with no suitable and reasonable explanation and answers for it ? There is no suitable theory behind but for all these processes thus looks to be very much ambiguous and contradictory? And one reason for all these controversy, ambiguity with no suitable theory giving very reasonable and consistent explanation and answers and got it is existence is an and thus correct. And thus necessities very badly need of very suitable, reasonable, without ambiguity giving very clear picture of this universe creation and not Universe formation assumed by conventional precedent science needing suitable new modern theory. And yes! There is such New Revolutionary modified theory is there, which called The Almighty God's creation theory to be called scientifically New Revolutionary Modified Theory (NRMT) which will be explained in due course of time? This theory will reasonable removed most of the major 100 contraversies which is already computerised print out about more than 800 pages will be required just spelling and gramitically correction which consist more than 800 pages which will be my part of second book which will be published after publishing my first book which is entitle major contraversies of the present science.

#### **ACKNOWLEDGEMENT:**

All the reaserch has started just as droplate when I was doing my routing testing work in Haji Hassan Reay Mix Concreate Co. working as a chemical laboratory incharge and doing my routing testing work finding out chloride content (equivalent sodium chloride in % present in a our raw material right from hidrolic cement course aggregate sand mixing water etc. All this by GREAT

BLESSING OF THE ALMIGHTY GOD and after that I have done 100s of experiment in my chemical laboratory which was very and very astonishing and unprecedented in a current science all this experiment I have done in 1983 onwards till this date and all this ALMIGHTY GODS CREATION THEORY which I am placing here in scientific language as a NEW REVOLUTIONARY MODIFIED THEORY (NRMT) which will be disclosed and will remove all this 100 of controversies present in a current science and I am very and very thankful to THE ALMIGHTY GOD THE GREATEST AND ONLY CREATOR OF THIS WHOLE UNIVERSE and whatever it consists including our planet earth.
